1. Purpose

This document explains the various activities performed as part of Testing of the 'TekNotes' application.

2. Application Overview

'TekNotes' is a centralized digital platform designed to solve the problem of students spending hours searching the internet for reliable study materials. The system provides students with easy access to well-organized, course-specific notes for major and minor subjects. It manages the gathering, saving, and distribution of academic learning resources, alongside fostering student collaboration through interactive, password-protected Study Groups.

3. Testing Scope

a) In Scope

Functional Testing for the following modules are in Scope of Testing

- Upload and Bookmark Module (Uploading files up to 25MB, adding/removing bookmarks)
- Study Group Module (Searching, creating, joining, group chat messaging, and file sharing up to 5MB)

b) Out of Scope

- Direct 1-on-1 private messaging between students (outside of groups)
- Teacher portal for grading or reviewing materials
- Performance Testing and Malware Scanning (explicitly out of scope per FSD FR-SG-04)

c) Items not tested

No items in the defined functional scope were skipped, though some test cases could not be fully completed (Marked "Blocked") due to missing UI elements in the current build.

4. Metrics

d) No. of test cases planned vs executed

Test cases planned	Test cases executed	TCs Pass	Tcs Failed	Tcs Blocked
31	20	9	7	4

Project Name: TekNotes

Date: 05-12-2026

By: Bayonas, Jay Lord C., Ramirez, Ruther Gerard L.

e) No. of test cases passed/failed

No. of test cases planned vs executed

f) No of defects identified and their Status & Severity

	Critical	Major	Medium	Cosmetic	Total
Closed	0	0	0	0	0
Open	1	6	1	3	11
					11

g) Defects distribution – module wise

	Upload & Bookmark Module	Study Group Module	Total
Critical	1	0	1
Major	2	4	6
Medium	1	0	1
Cosmetic	2	1	3
Total-->	6	5	11

Defects Distribution-Module Wise

5. Types of testing performed

a) Smoke Testing

Smoke testing was executed on a limited set of core functionalities to confirm that the build is stable enough for broader test activities. Only critical paths and high-level workflows relevant to features included in this release were validated.

b) System Integration Testing

This SIT execution was conducted as Feature-Specific Integration Testing, prioritizing the Upload and Add Bookmark Module and the Study Group Module. Non-scoped components and unrelated system interfaces were not included in this phase. The testing validated data flow, interface behavior, and inter-module communication only for the scoped features. Integration scenarios outside this defined scope were excluded and will be validated in subsequent SIT.

Project Name: TekNotes

6. Test Environment & Tools

Application URL	localhost:3000
Apps Server	Localhost
Database	MySQL
Test Management	Testmo

7. Lessons Learnt

S. No	Issues faced	Solutions
1	Test cases were divided between partners (Ramirez: Upload/Bookmarks, Bayonas: Study Groups), making it difficult to merge execution data.	Test cases were divided between partners (Ramirez: Upload/Bookmarks, Bayonas: Study Groups), making it difficult to merge execution data.
2	Several test cases (e.g., editing/deleting messages, filtering by course code) were missing necessary UI buttons on the frontend.	Marked these test cases as "Blocked" rather than "Failed" and noted the missing features for the development team before further QA handoff.
3	System behavior failed exactly at the defined boundaries (e.g., rejecting files exactly at 25.00MB).	Clarified inclusive vs. exclusive boundary rules with the developers early on to prevent ambiguity.

8. Recommendations

- **Implement Client-Side Validation:** Add strict frontend validation for file extensions (preventing .exe uploads) and file sizes (25MB for uploads, 5MB for chat) before the request reaches the server.
- **UI Feature Flags:** If features like "Edit/Delete Message" or "Course Code Search" are not yet ready in the backend, they should be disabled or flagged rather than leaving the UI unresponsive or missing, to prevent blocking downstream QA flows.

9. Best Practices

- **Comprehensive Evidence Logging:** Taking step-by-step screenshots for every passed, failed, and blocked test case within Testmo provided undeniable traceability, making it significantly easier to document exact failure points for the development team.
- **Modular Execution:** Dividing the test execution load strictly by modules (10 cases per tester) allowed for focused, parallel testing, which optimized the time spent finding functional gaps.

10. Exit Criteria

<Exit Criteria is defined as a Completion of Testing by fulfilling certain conditions>

Criteria	Status (Yes/No)
All selected 20 test cases have been executed	Yes
At least 95% of test cases have passed	No (45% Passed)
All Critical and High severity defects are resolved and verified	No (1 Critical, 6 major Open)
Test coverage meets the defined scope and requirements	Yes
Test summary report has been reviewed and approved by stakeholders	Pending

11. Conclusion/Sign Off

Because the Exit Criteria were **not** met (yielding only a 45% pass rate and 11 open defects out of the 20 executed tests), this application build is **not suggested to 'Go Live'**. Critical and major defects—such as the system accepting executable (.exe) files, failing to enforce file size limits, and missing core group chat functionalities (editing/deleting messages)—must be resolved by the development team. A full re-test of the failed and blocked cases must be conducted in the next cycle before the system can be deployed.
